Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                               DOMAIN: THE SPACER DOMAIN AND THE TSP TYPE-1 DOMAINS ARE IMPORTANT FOR A TIGHT INTERACTION WITH THE EXTRACELULAR MATRIX.

PTM: THE PRECURSOR IS CLEAVED BY A FURIN ENDOPEPTIDASE (BY SIMILARITY).

SIMILARITY: BELONGS TO PEPTIDASE FAMILY M12B.

SIMILARITY: CONTAINS 1 DISINTEGRIN-LIKE DOMAIN.

SIMILARITY: CONTAINS 3 TSP TYPE-1 DOMAINS.
CATALYTIC ACTIVITY: CLEAVES AGGRECAN AT THE 1683-GLU-1-LEU-1684 SITE, WITHIN THE CHONDROITIN SULFATE ATTACHMENT DOMAIN. COFACTOR: BINDS 1 ZINC ION (BY SIMILARITY). SUBCELLURAR LOCATION: Secreted. Associated with the extracellular matrix (By similarity). INDUCTION: DOMN-REGULATED IN ENDOTHELIAL CELLS DERIVED FROM CIRRHOTIC LIVER.

tissue disorder characterized clinically by severe skin fragility and joint hypermobility and biochemically by the presence in skin of procollagen incompletely processed at the N-terminus. SIMILARITY: BELONGS TO PEPTIDASE FAMILY M12B. MILLARITY: CONTAINS I DISTREGRIN'LIKE DOMAIN. SIMILARITY: CONTAINS 4 TSP TYPE-1 DOMAINS. CAUTION: HAS SOMETIMES BEEN REFERRED TO ADAMTS3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    HCFKGHCIWLTPDILKRDGSWGA -> FRPGAVAHACYPS

SUBUNIT: MAY BELONG TO A MULTIMERIC COMPLEX. BINDS SPECIFICALLY TO
COLLAGEN TYPE XIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             matrix (By similarity).

TISSUE SPECIFICITY: ENZYMATIC ACTIVITY IS DETECTED AT HIGH LEVEL
IN ALL TYPE I COLLAGEN-RICH TISSUES SUCH AS SKIN, BONES, TENDONS
AND AORTA AND AT LOW LEVEL IN BRAIN AND THYMUS. THE MRNA LEVELS
WERE DISPROPORTIONATELY HIGH IN HEART, LIVER, RETINA AND MUSCLE.
DOMAIN: THE SPACER DOMAIN AND THE TSP TYPE-1 DOMAINS ARE IMPORTANT
FOR A TIGHT INTERRACTION WITH THE EXTRACELLULAR MATRIX.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DISEASE: DEFECTS IN ADAMIS2 ARE THE CAUSE OF DERMATOSPARAXIS, A RECESSIVELY INHERITED DISORDER CHARACTERIZED BY SEVERE SKIN FRACILITY AND BIOCHEMICALLY BY THE PRESENCE IN SKIN OF PROCLLAGEN
                                                                                                                                                                                                Colige A., Beschin A., Samyn B., Goebels Y., Van Beeumen J.,
Nusgens B.V., Lapiere C.M.;
Nusgens B.V., Lapiere C.M.;
Characterization and partial amino acid sequencing of a 107-kDa
procollagen I N-proteinase purified by affinity chromatography on
immobilized type XIV collagen.",
J. Biol. Chem. 270:16724-16730(1995).
I- FUNCTION: CLEAVES THE PROPEPTIDES OF TYPE I AND II COLLAGEN PRIOR
TO FIBRIL ASSEMBLY. DOES NOT ACT ON TYPE III COLLAGEN PRIOR
PLAY A ROLE IN DEVELOPMENT THAT IS INDEPENDANT OF ITS ROLE IN
COLLAGEN BIOSYNTHESIS.
                                new member of the superfamily of zinc-metalloproteinases a sites for cells and other matrix components.";
